SUBJECT: NDC Changes to Impact IV Solutions and Parenteral Nutrition Portfolios

Dear Valued Customer.

As part of ongoing integration activities, ICU Medical IV Solutions and Nutritionals products will be undergoing a change to the National Drug Codes (NDC) in order to fully transition this portfolio to the ICU Medical brand. This is just another example of the commitment we have to the IV Solutions and Nutritionals portfolio. We will continue to make significant investments in this business over the coming years. ICU Medical acquired this portfolio from Pfizer in February 2017 and our goal is to continue meeting the needs of our customers and patients nationwide. In order to provide as much relevant information as possible to ensure a smooth transition, please review the updated conversion schedule in the Appendix B excel document. These conversions tentatively extend throughout 2019 and timing will continue to be updated ongoing.

We are taking additional actions to ensure that the needs of our customers are consistently met.

- 1. Part of the information packages that will be available for download throughout the lifecycle of the transition are the old and new barcodes. These can be found in the Appendix B excel document appropriately tied to each NDC number.
- 2. We are proactively working with the databanks to ensure new product information is loaded within the drug database systems. New product information will be available at the time of conversion.
- 3. When the Hospira NDC product reaches approximately 3 weeks of supply, we will be collapsing the inventory into our 4 primary warehouses to allow for rapid, most efficient depletion of 0409 inventory. Our customer care teams will ensure that Hospira NDC (0409) labeled inventory is shipped out and invoiced against orders until inventory depletion. Once inventory of the 0409 is depleted, orders will be converted at the line item to the new ICU NDC item (0990).
- 4. We are proactively communicating product conversion timing with our trading partners. Our trading partners' goal is to sell through and exhaust 0409 Hospira labeled inventory before converting to 0990 ICU labeled product. Trading partners keep an average of 21 days of inventory on hand. We recommend that your facility complete the appropriate set up of the new ICU NDC product within your systems, while retaining the Hospira NDC product. This will ensure both products are usable during the conversion timeframe.

During the conversions to the new NDC labeler code, please note that we anticipate a small overlap in product availability timing for the "0409" and "0990" labelers. We ask that you keep the Hospira NDC labeler "0409" open in your systems until you have received confirmation from us that inventory at the item level has been exhausted in its entirety. Our customer care organizations will automatically route placed orders to the available NDC number (either 0409 or 0990). As a reminder, list/catalog numbers are **NOT** changing.

To view a list of NDC and barcode conversions as well as examples of new labeling for IV containers and shipping cartons, please visit www.icumed.com/solutionsndc.

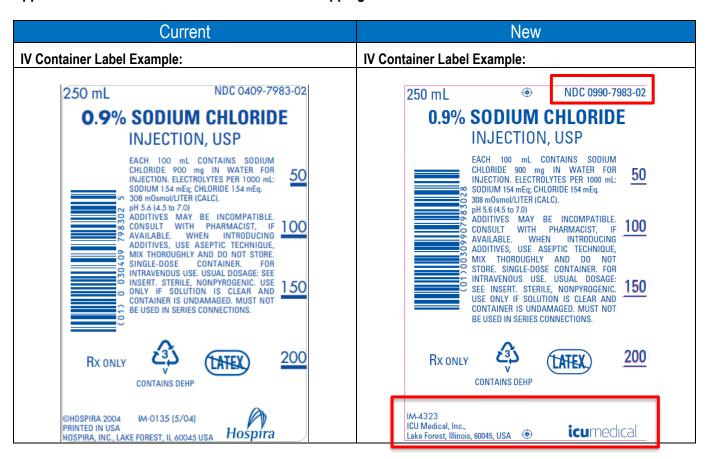

In an effort to help your facility manage throughout these changes, please visit www.icumed.com/solutionsNDC to obtain the latest information on the product level conversion schedule, which will include the current and new NDC and corresponding List Tuc/catalog number. In the event you have further questions or concerns, please contact our Customer Care Department at 1-844-804-4677 or email AllocationSupportUS@icumed.com. For all 340B related questions, please contact your sales representative.

Thank you again for your business and continued support of ICU Medical products.

Sincerely,
