# SafeSet Blood Sampling System

In response to the problems and risks associated with blood management, ICU Medical has developed the SafeSet Blood Sampling System. SafeSet is an intuitive, easy-to-use system that helps conserve blood while protecting against exposure to bloodborne pathogens and increasing the efficiency and safety of the blood sampling process.

## Safety and Efficiency of the SafeSet System Defined

- › SafeSet has a closed, in-line design that helps protect patients' blood from exposure to microorganisms that can cause bloodstream infections, and helps protect caregivers by limiting exposure to potential blood-borne pathogens.
- › Clearing volume can be reinfused back to the patient, which may help reduce blood waste and the risk of iatrogenic anemia.
- › Two needlefree access device options, luer and cannula, helps protect clinicians from exposure to infectious diseases.
- › Polycarbonate case helps protect sheath and plunger from exposure to non-sterile environment.
- › Kit configurations address both adult and neonatal/pediatric patient populations.
- › Available as a standalone system or with the ICU Medical Transpac™ pressure monitoring kits.

### Product Specifications

Reservoir	Adult, 1-10 mL and neonatal/pediatric, 1-3 mL
Without Latex Components	Yes

### Product Accessories

Shielded Blunt Cannula
Shielded Blunt Cannula with Tube Holder

SafeSet: A blood conservation system to help you reach your blood management goals.
